

Opportunity for Human Research Subjects

TMS + Cognitive Training for Depression following Concussion or Mild TBI

Category

Enrollment Closing Date

Brain Injury

6/30/26

Description

We are testing a new approach that combines transcranial magnetic stimulation for depression with cognitive training to improve daily functioning.

Requirements

Eligible participants are aged 18-65, experiencing Major Depression, and have a history of mild traumatic brain injury (i.e., concussion). The depression does not need to be linked to the TBI.

Benefits

Treatment involves 20 sessions of transcranial magnetic stimulation delivered over 4 weeks, and 6 sessions of one-on-one cognitive rehabilitation with a neuropsychologist (via telehealth or in-person). Total study compensation \$300
