

Memory Study for Veterans With or Without Concussion History

Memory Study for Veterans With or Without Concussion History

Category

PTSD/TBI

**Enrollment Closing Date**

June 30, 2024

Description

Dr. Lisa Delano-Wood is conducting brain imaging research in Veterans age 55-85 with or without history of mild traumatic brain injury (i.e. concussion). This study involves 2 visits: (1) clinical interviews and cognitive testing, and (2) MRI scan of the brain and small blood draw. Veterans will receive \$150 for completing both visits.

Requirements

We are seeking Veterans who: are 55-85 years old; do not have a neurological disorder; do or do not have concussion history; are MRI safe (no metal inside body).

Benefits

Your participation will help researchers learn more about brain structure and function in Veterans with TBI.
