

Predictors of Treatment Responsiveness in Trauma-Exposed Veterans

Category

Mental Health

Enrollment Closing Date

Apr 30, 2028

Description

Dr. Katia Harle is studying how evidence-based therapy for PTSD impacts decision-making and reward processing in trauma-exposed Veterans. We hope to identify brain markers that can be useful in predicting successful reduction of PTSD symptoms following treatment.

Requirements

- * Veteran who has experienced a traumatic event
- * starting trauma therapy
- * between the ages of 18-65 years old

Benefits

You can receive up to \$400 for completion of the study
